

IMPLEMENTATION MEETING COMMENTS

- Consider allowing WMS to do HW plan review – their expertise is currently underutilized.
- Would like to do HW work even if assigned to active landfill group.
- Beneficial reuse workload may be larger than we think.
- Is the plan review limited to Regional plan review staff ? [yes]
- Would the DNR support HW training (such as HW refresher) for someone in the active group? [Up to supervisor]
- Where will files be housed?
- What will happen to expertise?
- What is the transition plan and time frame?
- Why is there a separate closed landfill group? [redesign plan]
- Clarify if WMS would do plan review. [yes, for SW facilities in closed group]
- Clarify if 2 HW plan review engineers are included in 3 closed group engineers or if they are in addition to them. [included, a total of 3 engineers, 2 of which will do HW plan review]
- Need to account for non-landfill facilities at landfills (ie will they be covered by active plan review staff or WMS?)
- How do we deal with sites like Plainwell (fka Pope & Talbot) that are not remediation sites but require project management.
- Badger is also a site that is not ordinary and doesn't fit easily into one group or the other
- Will plan review decisions be made in Regions? [yes, but the dispute resolution process is available if experts disagree with decision]

OTHER COMMENTS

- Should remove recommendation in plan review implementation report regarding the expert PDs.
- How do we prevent closed sites with engineering from becoming ignored or forgotten?
- How will the preferences of plan review staff be solicited?
